E-Z Log Baler

The E-Z baling process 'rolls' the scrap into an interwoven bundle, providing tight bales that can still be processed by a 2,500 h.p. shredder with ease.

The bale density is 30-45 lbs. per cu. ft.

The E-Z Log Baler produces a bale size averaging 28" x 54" x variable (28" avg.)

Produces
up to 45 tons
per day.

Fully
portable in
the closed
position.

New seat
design for
more operator
comfort.

E-Z LOG BALER

With these features, why look anywhere else?

When the E-Z LOG BALER arrives on your site, just check the fluid levels and it's ready to go!

SPECIFICATIONS

Length 40'
Width 8'6"
Height with Crane 13'3"
Weight with Crane ~47,000 lbs.

Tires
11.00 x 22.5 duals; tandem axle
Baler Chamber Dimensions
7' x 4' 6" x 5' deep

Bale Size
54" x 28" x Variable (28" average)

Bale Weight
1,000 lbs. average

Bale Density
35-45 lbs. per cubic foot

Cycle Time, Start to Finish
Averages 3 minutes per bale

Two Main Ram Cylinders
8" x 67" (one cylinder outside each side of the baling chamber)

Optional 27' Crane Length

The portable E-Z LOG BALER is the machine you need to convert all grades of loose bulky metals into valuable shredder logs. It produces a bale quickly, efficiently, and neatly.

It is E-Z to operate and E-Z to service.

The E-Z LOG BALER has no costly set up time. The unit goes where the scrap is and one man controls the whole operation from the control platform. The operator can control the grapple crane up to 400°, with a reach of 23 feet, and can lift 2,000 pounds. By selecting the type of metal and the amount in each bundle you can produce log bales worth top dollar.

E-Z's innovative hydraulic compression sequence eliminates shredding troubles. Once the loose scrap is loaded into the baling chamber, the E-Z LOG BALER "rolls" the scrap into an interwoven low density bundle of about 20 to 30 pounds per cubic foot. "Rolling," as opposed to merely compressing, produces a log that will stay together even when dropped! Our "rolled" logs still remain loose with a density low enough for a 2,500 h.p. shredder to process them with absolutely no trouble.

All of the hydraulic cylinders are manufactured with high-grade seamless polished steel in our own factory. All E-Z LOG BALERS use standard parts and components - valves, pumps, and hydraulic parts. All the parts (and machine work needs) are also available at the R.M. Johnson Company plant. Operating as well as procedure instructions are provided by our trained specialists.

Ask about our Automatic Baling Chamber option which allows you to run the crane while still baling!
