E-Z LOG BALER

Here it is! The perfect baler for ANY salvage yard, scrap yard or parts yard in the industry. The all new Model 5 E-Z Log Baler offers more versatility to process cars, or scrap all with one machine. Yet it has a price tag that even a start-up company can budget for!

With zero set up time, pull into any yard and start turning those autos or scrap into operating revenue!

- Cycles in under 3 minutes!
- Produces up to 100 tons per day.
 - Fully portable.
- Many options now standard!

Baler Chamber Opening	7' x 10' x 5' deep
Bale Size	84" x 28" x Variable (36" average)
Bale Weight	2,300 lbs. average
Bale Density	35-45 lbs. per cubic foot
Cycle Time, Start to Finish	Averages 3 minutes per bale
All Logger Cylinders	10" x 4" Rod

The portable E-Z LOG BALER is the machine you need to convert all grades of loose bulky metals into valuable shredder logs. It produces a bale quickly, efficiently, and neatly including most autos.

It is E-Z to operate and E-Z to service.

The E-Z LOG BALER has no costly set up time. The unit goes where the scrap is and one man controls the whole operation from the control platform. The operator can control the crane up to 400°, with a continuous rotation grapple and a 27' boom. By selecting the type of metal and the amount in each bundle, you can produce log bales worth top dollar from your local shredder.

E-Z's innovative hydraulic compression sequence eliminates shredding troubles. Once the loose scrap is loaded into the baling chamber, the E-Z LOG BALER "rolls" the scrap into an interwoven low density bundle of about 35 to 45 pounds per cubic foot. "Rolling," as opposed to merely compressing, produces a log that will stay together even when dropped! Our "rolled" logs still remain loose with a density low enough for a 2,500 h.p. shredder to process them with absolutely no trouble.
