METALS

REMEDICATION INC.

Metals Remediation Inc. provides an innovative service that cleans accumulated yard dirt and generates profits from the burden.

Our patented, portable eddy current systems H.O.A.T-01/H.O.A.T-02 remove both trace non-ferrous metals as well as the ferrous metals from the dirt. Each H.O.A.T. has a system of two portable components, which are connected with conveyors and when mobilized, can be assembled to operate in less than a day!

The H.O.A.T.'s have been created to enhance our environment so yard owners can recover precious metals from their properties; H.O.A.T 01 / H.O.A.T-02 are available to remove trace metals that are left behind, on or near the ground surface, and in piles.

As a result of our successful services since 2006, there has been less weight and less waste hauled away to landfills.

Metals Remediation Inc. remediates undesirable piles of dirt and then rectifies the burdens associated with those piles.

Thomas Tuite, President and Founder of *Metals Remediation Inc.*, has utilized his 35+ years of experience in the Scrap Industry, to release a revolutionary service that truly recovers revenue from the burden.

"I observed issues for years, as a result of the burden. There was nothing economically available to solve the problem in the Scrap Industry – So, I created a solution and it's a "Hell Of A Thing!" – Thomas Tuite

**“Recovering
Profits From
Burden!”**

Since 2006,

Tom Tuite, owner and operator of Metals

Has utilized his 31 years of experience in the Scrap Industry, to provide services for recovering profits from burden.

The **HOAT**® has been available to remove trace metals that are left behind, on, or near the ground surface, and in piles.

A patented, portable, eddy current system, the **HOAT**® extracts priceless non-ferrous metals, as well as the valuable ferrous metals.

MADE IN THE U.S.A.

The system consists of 2 portable components connected with conveyors and when mobilized it can be assembled to operate in less than a day.
